U.S. Patent and Trademark Office PTOL-37 (Rev. 1-04)

## **DETAILED ACTION**

1. Claims 1-20 are pending. This action is in response to the amendment filed 10/8/2004. Applicant has amended claims 13 and 17-19.

## **Examiner's Amendment**

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Sean Wooden, ANDREWS KURTH, LLP on January 25, 2005.

3. The application has been amended as follows:

Please amend claim 13 as follows.

Claim 13 (currently amended): A method for efficient accessing of Java objects and methods by C++ graphical user interfaces, the method comprising:

a C++ graphical user interface issuing a method request to a C++ proxy object;

the C++ proxy object passing method data to a base proxy object based on the method request;

the base proxy object processing the method data, comprising:

getting a method ID based on the method data;

issuing JNI API calls with the method ID to call the Java method; and a Java object executing a Java method based on the processed method data.

Please amend claim 17 as follows.

Art Unit: 2126

Claim 17 (currently amended): The method of claim 16, wherein the base proxy object processing the method data further comprises:

executing the called base proxy object function; and getting a method ID based on the method data.

Please amend claim 18 as follows:

Claim 18 (currently amended): A method for efficient accessing of Java objects and methods by C++ graphical user interfaces, the method comprising:

a C++ graphical user interface issuing a method request to a C++ proxy object;

the C++ proxy object passing method data to a base proxy object based on the method request;

the base proxy object processing the method data;

a Java object executing a Java method based on the processed method data;

the base proxy object processing the method data, comprising

obtaining the Java object via a JNI API call, wherein the Java object instance data is passed through a JNI API; and

initiating C++ proxy object linkage to the Java object, wherein the Java object instance data is used to create the C++ proxy object.

Please amend claim 19 as follows.

Claim 19 (currently amended): A computer readable medium containing instructions for enabling the efficient accessing of Java objects and methods by non-Java graphical user interfaces, by:

a non-Java graphical user interface issuing a method request to a non-Java proxy object;

the non-Java proxy object passing method data to a base proxy object based on the method request;

Application/Control Number: 09/828,439 Page 4

Art Unit: 2126

the base proxy object processing the method data, comprising:

getting a method ID based on the method data;

issuing JNI API calls with the method ID to call the Java method; and a Java object executing a Java method based on the processed method data.

## **Allowable Subject Matter**

- 4. Claims 1-20 are allowed.
- 5. The following is an examiner's statement of reasons for allowance:

The prior art on record does not teach "base proxy object comprising one or more functions that encapsulate one or more JNI API calls necessary to call a Java method in the Java Virtual Machine based on the one or more method requests of the graphical user interface", as recited in claim 1, "the base proxy object processing the method data, comprising: issuing JNI API calls with the method ID to call the Java method," as recited in claims 13 and 19, and "obtaining the Java object via a JNI API call, wherein Java object instance data is passed through a JNI API" and "wherein the Java object instance data is used to create the C++ proxy object", as recited in claim 18. In other words, the prior art on record does not teach using a base proxy to wrap JNI APIs in the manner as recited above. The closest prior art on record, "Integrate Java and C++ with Jace" discusses generating C++ proxy classes (wrappers) for JNI values. The date of the publication, however, is after the filing date of the present application.

- 6. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
- 7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Sue Lao whose telephone number is (571) 272-3764. A voice mail service is also available at this number. The examiner's supervisor, SPE

Application/Control Number: 09/828,439 Page 5
